

Chapter 1: Advanced SQL Programming Techniques

FOR FETCH ONLY	1
OPTIMIZE-FOR-CLAUSE.....	2
WITH-CLAUSE.....	3
QUERYNO-CLAUSE.....	4
Joining Data from More than One Table.....	5
Inner Join.....	5
Full Outer Join.....	6
Left Outer Join.....	6
Right Outer Join.....	7
SQL Rules for Statements Containing Join Operations.....	8
Nested Table Expressions and User-defined Table Functions in Joins.....	9
Subqueries.....	10
Correlated and Uncorrelated Subqueries.....	11
Subqueries and Predicates.....	11
Coding a Subquery.....	12
Basic Predicate.....	12
Quantified Predicates: ALL, ANY, and SOME.....	13
EXISTS Keyword.....	14
Correlated Subqueries.....	15
Correlated Subqueries in an UPDATE Statement.....	16
Correlated Subqueries in a DELETE Statement.....	16
User Defined Functions.....	17
Example: User-defined Scalar Function.....	18
User-defined Function Definition: Components.....	20-21
User-defined Function Definitions: Examples.....	22
Writing a User-defined Function.....	23
Restrictions on User-defined Function Programs.....	23
User-defined Function as a Main Program or as a Subprogram.....	24
Passing Parameters in a User-defined Function.....	25-27
Scratchpad in a User-defined Function.....	28
Distinct Types.....	29-30
Distinct Types in Application Programs.....	31

Chapter 2: Dynamic SQL Processing

Monitoring the Database.....	1
RUNSTAT Utility.....	1
Dynamic SQL in Application Programs.....	2
Host Variables in Static SQL.....	3-4
Static SQL Statements with Input Host Variables.....	5
Dynamic SQL Statements.....	6
Caching Dynamic SQL Statements.....	7
Conditions for Statement Sharing.....	8
Keeping Prepared Statements After Commit Points.....	9
Limiting Dynamic SQL with the Resource Limit Facility.....	10
Choosing a Host Language for Dynamic SQL Applications.....	11-12
Dynamic Execution Using PREPARE and EXECUTE.....	13-14
PREPARE Statement.....	15
EXECUTE Statement.....	15

Indexes and Data-only Locking.....	12
Bind Options.....	13
Advantages and Disadvantages of the Combinations.....	14
ACQUIRE(ALLOCATE) / RELEASE(DEALLOCATE).....	14
ACQUIRE(USE) / RELEASE(DEALLOCATE).....	14
ISOLATION Option.....	15
Advantages and Disadvantages of the Isolation Values.....	15-16
CURRENTDATA Option.....	17
The Effect of WITH HOLD for a Cursor.....	18
Specifying Isolation by SQL Statement.....	19
WITH Clause.....	20
LOCK TABLE.....	21
The Effect of LOCK TABLE.....	21
Access Paths.....	22
Unit of Work in TSO: Batch and Online.....	23
Unit of Work in CICS.....	24

Chapter 6: General Efficiency Techniques

Monitoring the Database.....	1
RUNSTAT Utility.....	1
STOSPACE Utility.....	2
DB2 Traces.....	2
EXPLAIN Statement.....	2
REORG Utility.....	2
SQL Efficiency Techniques.....	3

Chapter 7: Table and View Design

Table Design.....	1
Table Considerations.....	1
Columns Considerations.....	2
Columns Consideration: NULL or NOT NULL?.....	2
Columns Consideration: NOT NULL with Default.....	3
Columns Consideration: Validation Routine for a Table.....	3
Columns Consideration: Edit Routine.....	3
Columns Consideration: Field Procedure.....	4
Physical Table Design.....	5
Design Storage Groups.....	5
Designing a DB2/SQL Data Base.....	6
Concurrent Access.....	7
Simple Tablespace.....	8
Partitioned Tablespace.....	9
Segmented Tablespace.....	10
Why Segmented Tablespace?.....	10-11
Options on CREATE TABLESPACE.....	12-13
Characteristics of Table Names.....	14-15
Data Types Used in Defining Tables.....	16
Additional Facts about Data Types.....	16
CHAR Versus VARCHAR.....	17
How Many Tables for Each Tablespace.....	18
Exit Routines for EDITPROC, VALIDPROC, and FIELDPROC.....	19
Audit Trace.....	20

Dynamic SQL for Fixed-list SELECT Statements.....	16
Declare a Cursor for the Statement Name.....	17
Open the Cursor.....	17
Fetch Rows from the Result Table.....	18
Close the Cursor.....	18

Chapter 3: Stored Procedures

Purpose and Function.....	1
Setting Up the Stored Procedures.....	2
Defining a Stored Procedure to DB2.....	3-4
Passing Environment Information to the Stored Procedure.....	5-6
Calling Other Programs.....	7
Special Registers in a Stored Procedure.....	7-8
Preparing a Stored Procedure.....	9-11
Stored Procedure Linkage Convention GENERAL.....	12-14
Running a Stored Procedure.....	15

Chapter 4: Triggers

Monitoring the Database.....	1
Why Use Triggers.....	2
Implementing Audit Trails.....	2
Implementing Business Rules.....	2
Enforcing Referential Integrity.....	3
Updating Summary Data.....	3
Trigger Characteristics.....	4-5
Restrictions When Coding Certain SQL Statements.....	6
Optional Variables.....	7
Errors and Performance.....	8
Creating and Using a Trigger.....	9
Parts of a Trigger.....	10-14
Invoking Stored Procedures and User-defined Functions from Triggers.....	15
Trigger Cascading.....	16
Ordering of Multiple Triggers.....	16
Creating Triggers to Obtain Consistent Results.....	16
CREATE TRIGGER Statement.....	17

Chapter 5: Planning for Concurrency and Locks

Concurrency and Locks.....	1
Suspension.....	2
Timeout.....	3
Deadlock.....	4
Recommendations for Database Design.....	5
Application Design.....	6
Lock Size.....	7
Lock Duration.....	8
Lock Mode.....	9
Modes of Table, Partition, and Table Space Locks.....	10
Lock Mode Compatibility.....	11

Create Table Options.....	21
Referential Integrity.....	22
Primary Key.....	22
Primary Key Constraints.....	22
Foreign Key.....	23-24
Table Space Calculation.....	25
Designing Indexes.....	26
Clustering Index.....	26
Partitioned Index.....	27
Unique Index.....	27
Index Design Considerations.....	28-29
Index Space Calculation.....	30
Designing Views.....	31
View Restrictions.....	32
Use of Catalog in Design.....	33

Chapter 8: Performance and Tuning

Performance Recommendations.....	1
Built-in Functions.....	1
GROUP BY.....	1
Use of Index: 'OR' Predicate.....	1
'NOT' Predicate.....	2
'LIKE' Predicate.....	2
Matching Data Type.....	3
Use the Same String Length.....	3
Arithmetic Expressions.....	4
Columns to be Updated.....	4
Distinct.....	4
Subquery or Join.....	4
Joining Table to Itself.....	5
Redundant Predicate.....	5
Access Path Selection.....	6
Access Methods.....	6
Locks.....	7
DB2 Lock Attributes.....	7
Lock Table Statement.....	8
The Logic Underlying Index Selection.....	9
Joining Table Logic.....	10
Nested Loop Join.....	10
Merge Join.....	10
EXPLAIN Statement.....	11-14
EXPLAIN Exercises.....	15-16
When to Tune.....	17-18
Tuning Strategy.....	19
Improve the Speed of the DB2 Subsystem.....	19-21
Improve DASD Utilization.....	22
Improve Virtual Storage Utilization.....	23
Improve Concurrent Data Access.....	24
Improve the Processing of Large Tables.....	24-25
Use the BIND Process.....	26
Determine the Size of the Active Logs.....	26
Change Catalog and Directory Size and Location.....	27

Chapter 9: Recovery and Security

Loading Data	1
Recovery	2
Subsystem Log	2
DB2 Log	2
Active Log	3
Archive Log	4
Categories of Log Records	5
Taking Checkpoint Records	6
Recovery Procedure	7
Reconstructing the Database	7
Security	8
Security Procedures for Database Users	8-9
Security Procedures for Programmers	10
Security Procedures for Operations Personnel	10
Concurrency	11
Problems with Uncontrolled Concurrency	11
Locking	11
Performance Considerations	12

Chapter 10: Call Attachment Facility

CAF Capabilities	1
Task Capabilities	2
Programming Language	3
LOAD and Run Environments	4
How to Use CAF	5
Connection Functions	6
DSNALI	7
Explicit Load of DSNALI	8
General Properties of CAF Connections	9
Task Termination	10
Call DSNALI Parameter List	11
CONNECT	12
OPEN	13
CLOSE	14
DISCONNECT	15
TRANSLATE	16
CAF Return Codes and Reason Codes	17
Sample JCL for Using CAF	18
