

<b>Chapter 1: Introduction</b>	
What is DB2? .....	1
DB2 Subsystems .....	2
The Hierarchical Model .....	3
Hierarchical Model of Database .....	4
Network Model .....	5
Network Model of Database .....	5
Relational Model .....	6
<b>Chapter 2: The Relational Model</b>	
History of Relational Model .....	1
Relational Model of Database .....	2
Characteristics of Relational Model .....	2
Advantages of Relational Model .....	3
DB2 Objects .....	4-6
Creating DB2 Objects .....	7
CREATE TABLE .....	8
Structure of Table .....	9
Unnormalized and Normalized .....	10
Indexes .....	11
Selection Operation .....	12
Select Statement .....	12
Purchase Order Relation .....	13
Projection Operation .....	14
Purchase Order Table .....	14
Joining Operation .....	15
Logical Tables Implemented on Physical Tables .....	16
Real Tables .....	17
Views as Virtual Tables .....	18
<b>Chapter 3: DB2</b>	
DB2 .....	1
Structured Query Language .....	2
Data Access .....	3
SQL - Ease of Use .....	3
Entering DB2 Data .....	4
Generating Application Programs .....	5
Significance of Bind Process .....	6
COBOL Program - Select Unique Row .....	7
COBOL Program - Select Multiple Rows .....	8
Role of DB2 Catalog .....	9
Security/Integrity Facility .....	10
DB2 Objects .....	11
Entering DB2 Transactions .....	12

<b>Chapter 8: The Relational Model</b>	
Goals of Design .....	1
Two Steps in Design .....	1
Entities .....	2
Classes of Entities .....	2
Properties of Entities .....	3
Normalization .....	4
First Normal Form .....	4
Second Normal Form .....	4
Problem of Table Not in 2nd Normal Form .....	5
Violation of the Second Normal Form .....	5
Original Unnormalized Table - Second Form .....	6
Transformed to Second Normal Form .....	7
Third Normal Form .....	7
Problem of Table Not in 3rd Normal Form .....	8
Violation of the Third Normal Form .....	8
Original Unnormalized Table .....	9
Transformed to Third Normal Form .....	9
<b>Chapter 9: Physical Design and Efficiency Techniques</b>	
Physical Design .....	1
Factors in Physical Design .....	1
Logical Versus Physical Design .....	2
Efficiency Techniques .....	3
Efficiency and SQL Example .....	3
When to Use Index .....	4
When to Tune? .....	5
Using RUNSTAT Utility .....	5
EXPLAIN Statement .....	6
REORG Utility .....	6
Specific Tuning Strategies .....	7
Reduce Amount of I/O Example .....	7
Reduce Time Needed for I/O Example .....	8
Reduce Use of Processor Example .....	8
Improve DASD Utilization Example .....	9
Virtual Storage Utilization Example .....	9
Improve Concurrent Data Access Example .....	10
Use the BIND Process .....	10
Catalog and Directory Size/Location .....	11
<b>Chapter 10: Data Sharing and Locking Enhancements</b>	
Better Performance and Security: Using Stored Procedures .....	1
Additional Management Facilities .....	2
Data Sharing .....	3
Parallel Query Processing .....	4
Performance Improvements .....	5
New Indexes and Locking Changes .....	6
Outer Join .....	7
Table Check Constraints .....	8
Productivity Enhancements .....	9

<b>Chapter 4: Utilities and Commands</b>	
Available with the Product .....	1
LOAD .....	2
COPY and MERGE .....	3
RECOVER .....	4
REORG .....	5
RUNSTAT .....	6
STOSPACE .....	7
DB2 Commands .....	8
<b>Chapter 5: Security and Integrity</b>	
Philosophy and Implementation .....	1
GRANT AND REVOKE .....	2
Views .....	3
Resource Limit Facility .....	4
Referential Integrity .....	5-6
Locking under DB2 .....	7
Implicit Locking .....	7
Explicit Locking .....	8
<b>Chapter 6: Dynamic and Static SQL - Embedded</b>	
Static SQL .....	1-2
Generating Application Programs that Process DB2 Tables .....	3
Dynamic SQL .....	4
<b>Chapter 7: DB2 Releases and Related Products</b>	
Evolution of DB2 .....	1
Milestones .....	1
Index Lockaside .....	2
New Limits .....	3
Related Products .....	4
DB2 Organization .....	5
Concurrency Control .....	5
SQL Enhancements .....	6
Stored Procedures .....	6
Virtual Pools and Hiperpools .....	7
Data Sharing .....	7
I/O and CPU Parallelism .....	8
Recovery Facilities .....	8
Additional Facilities .....	8

<b>Chapter 11: OOPs Features in DB2</b>	
Triggers .....	1
Parts of a Trigger .....	2
DB2 Object-relational Extensions .....	3
LOBs .....	4-5
User-defined Functions .....	6
Defining a User-defined Function .....	7
Components of a User-defined Function Definition .....	7-8
Stored Procedures .....	9-11
Maximum Data in a Table .....	12
Altering Variable Length Columns .....	13
Faster, More Parallel Utilities .....	14
Parallel Index Build .....	14
Faster Discard and Unload During REORG .....	14
Workload Balancing in a Parallel Sysplex .....	15
Improvements to Join Processing .....	16
Optimization Hints .....	17
Characteristics of the ROWID Data Type .....	18
Java Enabled .....	19
DB2 Database Connection Pooling .....	20
<b>Chapter 12: DB2 Tools</b>	
Available Tools .....	1
DB2 Administration Tool .....	2
Major Functions of DB2 Admin .....	3
DB2 Administration Screens .....	4
DB2 DataPropagator .....	5
DB2 Estimator .....	6
During the Initial Design Phase .....	7
Developing Application and Database Objects .....	7
When Your Application is in Production .....	8
DB2 Extenders .....	9
DB2 Performance Monitor .....	10
Query Management Facility .....	11
Visual Explain .....	12
Visual Explain: New Features .....	13
