

Chapter 1: Getting Started

Stored Procedures: Purpose and Function.....	1
Stored Procedures: Benefits	2
Multi-tiered Applications and Stored Procedures.....	3
Stored Procedure Types	4
External Procedures	4
SQL Procedures.....	5
DB2 Catalog Tables	6

Chapter 2: Programming Environment

Language Environment - LE	1
Language Environment Run-time Options.....	2
MSGFILE Run-time Option	2
RPTOPTS Run-time Option	3
Options to Limit Storage Required by LE at Execution Time.....	4
Viewing RUNOPTS Settings.....	5
Security and Authorization	6
Workload Manager Security Requirements	6
Privileges Required to Create Stored Procedures	6
CREATEIN Privilege on the Schema	7
BINDADD Privilege for Stored Procedures that Contain SQL	8
Privileges Required to Execute Stored Procedures	8
Privileges to Execute a Stored Procedure Called Dynamically.....	9
Privileges to Execute a Stored Procedure Called Statically	9
Limiting the Types of SQL that can be Executed	11

Chapter 3: Developing Stored Procedures

Stored Procedures - Defining.....	1
The CREATE or ALTER PROCEDURE Statement	2
CREATE PROCEDURE - EXTERNAL - Option List	1
CREATE PROCEDURE - SQL - Option List	3
Number of Returned Result Sets	4
SQL Types - Supported	5
Passing Parameters	6
Parameter Style GENERAL	7
Parameter Style GENERAL WITH NULLS	8
Parameter Style DB2SQL	9
Parameter Style JAVA	10
Deterministic Stored Procedures	11
Stored Procedure Load Module in Memory	12
Main Program versus Subprogram	13
Max Number of Failures	14
Commit Before Returning	15
Null Parameters.....	16
COBOL Stored Procedure	17
REXX Stored Procedure	18
SQL Language Stored Procedure	19

Chapter 6: WLM: Workload Manager

WLM Concepts.....	1
Goals and Service Classes	2
SLA: Service Level Agreement	3
Workload Manager Components	4
Stored Procedures - Changes in Implementation	6
Release Specific Changes	7
WLM Considerations	8
DB2 Stored Procedure Enclaves.....	8
Dedicating Address Spaces.....	8
Controlling the Number of DB2 Stored Procedure Address Spaces Automatically	9
WLM-established Address Spaces	11
Three Options.....	12
Configuration Considerations	12
WLM: Server Address Space Management Function	13
Stored Procedure Called by a TSO user	15

Chapter 7: ACCESSING CICS

CICS and DB2 Applications	1
Accessing CICS Systems from DB2 Stored Procedures.....	2
Accessing CICS Systems through EXCI	2
Preparing CICS and WLM for EXCI	3
CICS Resource Definitions	3
WLM Definitions	5
Coding a Stored Procedure to Use EXCI	6
Accessing CICS Systems through Stored Procedure DSNACICS	8
DSNACICX User Exit.....	10
Accessing DB2 Stored Procedures from CICS	11

Chapter 4: COBOL Stored Procedures

Passing Parameters	1
Preparing and Binding a COBOL Stored Procedure	2
Actions for the Calling Application.....	3
Handling Null Values in Parameters.....	4
Handling Nullable Parameters	5
DBINFO Parameter - Handling	6
Parameter List in the Linkage Section using DBINFO	7
Result Sets in the Calling Program - Handling.....	10
Nested Stored Procedures.....	12
DB2 V8 Considerations for Nested Stored Procedures.....	13
Differences Between Subprograms and Stored Procedures	14
REXX Programming	15
Passing Parameters	16
Preparing and Binding a REXX Stored Procedure.....	18
Handling Multiple Result Sets	19

Chapter 5: Defining SQL Procedures

SQL Procedures - Preparing and Binding	1
Handling Terminators Defaults.....	2
SQL PI Statements.....	3
Variables - Declaring and Using	4
Passing Parameters	5
Remote Stored Procedures	6
Communications Database	7
CONNECT Statement.....	8
Stored Procedures: Performance Concepts	9
Performance Concepts: without Stored Procedures	9
Performance Concepts: with Stored Procedures	9
Address Spaces - DB2 Versions	10
Assigning Address Space Priority	11
Stored Procedure: Execution Life Cycle.....	12
Stored Procedure Execution Time Components.....	14
Execution Time Component Breakdown	15
DISPLAY PROCEDURE Command	16

Tailored Content - Provided on CD**Module 1: Stored Procedures**

Client Specific Performance Objectives	1
Objectives	2
Stored Procedure Benefits - Remote Invocation.....	3
Stored Procedures: Local	4
Stored Procedures Authorization	5
Load Module Considerations	6

Module 2: CREATE PROCEDURE

Client Specific Performance Objectives	1
Objectives	2
CREATE PROCEDURE	3
CREATE PROCEDURE Clauses.....	4-12
CREATE PROCEDURE Example.....	13-15
ITERATE Example	16-17
OVERFLOW Example.....	18

Module 3: Procedure COMMANDS

Client Specific Performance Objectives	1
Objectives	2
Variable Names	3
Procedure Components.....	4
Comments.....	5
Assignment Statement.....	6
CALL Statement	7
CASE Statement	8
Case Example	9
Case Example 2	10
Compound Statement.....	11-14
GOTO Statement	15
IF Statement	16
ITERATE Statement	17
Iterator Example	18
LEAVE Statement	19
LOOP Statement	20
REPEAT Statement	21
RESIGNAL Statement	22-23
RETURN Statement	24
SIGNAL Statement	25
WHILE Statement	26

Module 4: Storage Procedure Catalog Information

Client Specific Performance Objectives	1-2
Objectives	2
Retrieving Catalog Information	3
Retrieving Catalog Information About Triggers	4
Invalid Triggers	5
COMMENT	6

Module 5: Stored Procedure Performance

Client Specific Performance Objectives	1-2
Trivial SQL Procedure	3-4
Sample Trivia Procedure	5
Inline SQL PL	6-7
Temporary Tables	8
Untuned Temporary Table	9
Temporary Table	10
Condition Handlers	11
Avoid Multiple Statements When Just One Will Do	12-13
Improve Cursor Performance	14

Module 6: COMMIT in Stored Procedure

Client Specific Performance Objectives	1-2
COMMIT and ROLLBACK in a Stored Procedure	3
Defining SP with Commit	4
COMMIT ON RETURN	5
Cursors and COMMIT	6
COMMIT Restrictions	7

Module 7: Special Registers

Client Specific Performance Objectives	1-2
Special Register	3

Module 8: Linkage

Client Specific Performance Objectives	1-2
Objectives	3
Linkage Conventions	4
Initializing Output Parameters	5
Parameter Lists	6
GENERAL	7
GENERAL WITH NULLS	7
GENERAL Linkage in COBOL	8
GENERAL WITH NULLS	9
SQL Linkage in COBOL	10-11
SQL Data Types Mapped to Typical COBOL Declarations	12
