

Chapter 1: DB2 System Concepts

Client Specific Performance Objectives and Examples	1-2
SQL	3
Static SQL	4
Dynamic SQL	5
CLI	6
Schemas	7
Tables	8-10
Indexes	11
Keys	12
Constraints	13
Triggers	14
Storage Structures	15
Databases	16
Catalog	17
Table Spaces	18-19
Views	20
Sequences	21
Routines	22
Locking, Commit, and Rollback	23
Unit of Work	24
Unit of Recovery	25
Packages and Application Plans	26-27
Coded Character Sets and CCSIDs	28
Java Database Connectivity	29
Indexes	30-31
Address Spaces	32-33
Privileges	34
Communications Database	35
DB2 Directory	36
Directory Table Spaces	37-38
Active and Archive Logs	39
BSDS: Bootstrap Data Set	40
Buffer Pools	41
Resource Limit Facility Database	42
Active and Archive Logs	43
BSDS: Bootstrap Data Set	44
Buffer Pools	45
TEMP Database	46
DB2 Attachment Facilities	47-48
Control and Maintenance of DB2	49
Commands	50
Utilities	51

DB2 z/OS Administration

Table of Contents

Constraints	30
Unique Constraints	31-32
Table Check Constraints	33-34
Views	35-37
View - Creation	38-39
DROP VIEW	40
Read-only and Updatable Views	41
CHECK OPTION	42-43
Indexes	44
CREATE INDEX	45
Index - Creation	46-47
ALLOW REVERSE SCANS	48-49
Clustering Indexes	50-51
What Indexes Should be Created	52-53
Indexes - Types	54
Unique Indexes	55
Clustering Indexes	56
Partitioning Indexes	57
Secondary Indexes	58-59
User-defined Data Types	60-61
Naming the Table	62
Defines the Attributes of a Column	63-64
NOT NULL	65
Constraint and Primary Key	66
CHECK (check-condition)	67
DEFAULT	68
GENERATED	69
GENERATED - AS IDENTITY	70
Minimum and Maximum Values	71
PRIMARY KEY (column-name,...)	72
UNIQUE(column-name,...)	73
FOREIGN KEY references-clause	74
REFERENCES table-name (column-name,...)	75
LIKE table-name or view-name	76
Creating a Table with an Identity Column	77
Table Example	78
Table Example - Foreign Key	79
Database Design	80-81
DB2 Performance Management: Approach	82-83
Normalization	84-85
Eliminate Repeating Groups - First Normal Form	86-87
Eliminate Redundant Data - Second Normal Form	88-90
Eliminate Columns Not Dependent On Key - Third Normal Form	91-92
Record Size and Page Size	93-95
De-normalization Considerations	96-97
Use Segmented or Partitioned Table Spaces	98-102
Data Compression	103-108
Loading Large Tables	109-110
Index Design Considerations	111
Partitioning Indexes	112-113
When to Build Indexes	114
The Ideal Index	115-116

Chapter 2: Creating Storage Objects

Client Specific Performance Objectives and Examples	1-2
Storage Group	3
DB2-managed Data Sets	4
Auxiliary Storage	5-6
Control Interval Sizing	7
Creating DB2 Storage Groups	8
SYSDEFLT	9
SMS for Managing DB2 Storage Groups	10
Deferring Allocation of DB2-managed Data Sets	11-12
Data Set Management	13-14
CREATE STOGROUP	15-16
Volume Processing	17
CREATE STOGROUP Example	18
Design Implementation	19
Implementing Databases	20-21
Table Space - Implementation	22
Table Space - Creating Explicitly	23-24
Implicit Table Space	25
Tablespace Name	26
Page Size - Choosing	27-28
Page Sizes - Larger	29-30
CREATE TABLESPACE	31-33
STOGROUP	34
PRIQTY Integer	35
SECQTY Integer	36
ERASE	37
Free Space	38-39
NUMPARTS Integer	40
LOCKSIZE	41
LOCKMAX	42
COMPRESS	43
SEGSIZE Integer	44
Create Tablespace	45

Chapter 3: Database Design

Client Specific Performance Objectives and Examples	1-2
DB2 Base Tables	3
DB2 Temporary Tables	4
DB2 Base Tables and DB2 Temporary Tables	5-7
CREATE TABLE	8-14
Table - Creation	15-16
LIKE Option	17
Storing Tables in the Database	18
Altering a Table	19-20
Altering a Table - Restrictions	21
Dropping a Table	22
NOT PADDED	23
Indexes for Avoiding Sorts	24
Schemas	25
NOT NULL, DEFAULT, and GENERATED	26
GENERATED ALWAYS Option	27-29

DB2 z/OS Administration

Table of Contents

Chapter 4: Table and Index Design

Client Specific Performance Objectives and Examples	1-2
Data Types	3-4
Byte Counts by Data Type	5-6
Consistent Data Types	7
VARCHAR	8-11
VARCHAR Performance Savings	12
VARCHAR Recommendation	13
NULL	14
Handling Nulls in the Application	15
Column Placement	16-18
Key Design	19-21
Surrogate Key - Consider When	22
Volatile Tables	23-24
Derived Columns	25
Aggregation	26-28
Materialized Query Tables	29-30
Partitioning - Benefits	31
Partitioning Considerations	32
DB2 Compression	33-34
DB2 Compression - When to Use?	35
Cost of Updates on Compressed Rows	36
When Does the Compression Dictionary Get Built?	37-38
Page Size	39
Rows Per Page	40-43
Page Size and I/O Cost	44
Index - What is it?	45
Sample - Three-level Index Structure	46
Indexes - Why Build?	47-48
Index - Uniqueness	49
Index - Improve Performance	50
Index - Cost	51
Index - Maintenance	52
Indexable Predicates - Matching	53-55
Index Screening Predicates	56-57
List Prefetch	58-60
Sort Avoidance	61-62
Index-only Access	63
Index Design Guidelines	64
Indexing Strategy - General	65-66
Index Design - Multi-column Index or Multiple Indexes	67
Predicate Use	68
Index Columns - Filtering	69
Uniqueness - Enforcing	70
Access Path - Efficiency	71
Multiple Index Access	72
Index Maintenance	73
Column Sequence in a Multi-column Index	74
Indexes - NOT PADDED and PADDED	75
NOT PADDED and PADDED Indexes	76-77
Clustering Index	78
Clustering Index - What is it?	79
Clustering versus a Non-clustering Index	80

Clustering Index - Choosing	81-83
Partitioned Tables - Indexing	84-85
Partitioned Partitioning Index	86-87
Nonpartitioned Indexes	88
NPI - Advantages	89
NPI - Disadvantages	90
Chapter 5 Estimating Disk Storage	
Client Specific Performance Objectives and Examples	1-2
Factors that Affect Storage	3-8
Calculating Record Lengths and Pages	9
Data Page	11
Maximum Record Size	12
Data Compression	13
Estimating Storage When Using the LOAD utility	14-17
Index Space Calculations	18-19
Calculate Pages for a Unique Index	20-22
Calculate Pages for a Nonunique Index	23-25
Total Space Requirement	27

Chapter 6 Security

Client Specific Performance Objectives and Examples	1-2
Security versus Auditing	3
Controlling Data Access	4
Identifiers	5
Access Control within DB2	6-7
Administrative Authorities	8
Ownership Privileges	9
Controlling Access to a DB2 Subsystem	10
Data Set Protection	11
Encryption	12
Controlling Access to DB2 Objects	13-14
Authorization IDs	15
Explicit Database Privileges	16-18
Explicit Package Privileges	19
Explicit Plan Privileges	20-21
Explicit Table and View Privileges	22-23
Administrative Authorities	24-25
Field-level Access Control by Views	26
Ownership of Objects - Establishing	27
Implicit Privileges - Granting	28
Authorization to Execute	29-30
Caching Authorization IDs for Best Performance	31
Caching IDs for Packages	32
Recommendation Against Use of Controls	33
User-defined Functions	34
Stored Procedures	35
Sequences	36
List the Views	37
DB2 Authorization IDs with Granted Privileges	38

Writing the Active Log	8
Offloading	9
Triggering Offload	10
Archive Log Data Sets	11
Dual Archive Logging	12
Archiving the Log	13-14
Quiescing Activity Before Offloading	15
Dynamically Changing the Checkpoint Frequency	16
Monitoring the System Checkpoint	17
Managing the BSDS: Bootstrap Data Set	18
BSDS Copies with Archive Log Data Sets	19
Changing the BSDS Log Inventory	20
Locating Archive Log Data Sets	21

Chapter 10 Monitoring and Controlling DB2

Client Specific Performance Objectives and Examples	1-2
Controlling DB2 Databases	3
Starting Databases	4-5
Starting an Object with a Specific Status	6
Table Space or Index Space with Restrictions - Starting	7-9
Monitoring Databases	10
Database Status	11
Wildcards	12
RESTRICT	13
ADVISORY	14
Application Programs	15-16
Lock Status	17
Lock Type	18-20
Lock Type	21
Held Lock Status	22
LOCKS ONLY	23
Stopping Databases	24-25
STOP Examples	26-27
Monitoring Buffer Pools	28
Starting User-defined Functions	29
Monitoring User-defined Functions	30
Stopping User-defined Functions	31
Monitoring Online Utilities	32
Control the IRLM	33-34
Starting the IRLM	35
Monitoring Threads	36-37
Controlling CICS Connections	38-39
Displaying In Doubt Units of Recovery	40
Monitoring and Controlling Stored Procedures	41
DISPLAY PROCEDURE	42
DISPLAY THREAD	43
DISPLAY WLM	44

Retrieving All IDs with DBADM Authority	39
Retrieving IDs Authorized to Access a Table	40
Retrieving All IDs that Can Change the Sample Employee Table	41
IDs that Have Been Granted the Privilege of Updating	42
Tables an ID is Authorized to Access	43
Plans and Packages that Access a Table	44
Multilevel Security	45
Multilevel Security - Advantages	46
Users and Objects	47
Security Labels	48
Implementing Multilevel Security with DB2	49
Row Level Security	50
Working with Data in a Multilevel-secure Environment	51
GRANT Database Privileges	52
GRANT Package Privileges	53
GRANT System Privileges	54
GRANT Table or View Privileges	55

Chapter 7 Auditing

Client Specific Performance Objectives and Examples	1-2
Who is Privileged?	3
Who Accessed Data?	4
Starting the Audit Trace	5
Stopping the Audit Trace	6
Audit Class Descriptions	7-8
Auditing a Specific Table	9-10
Role of Authorization IDs	11
Formatting Audit Records	12
Other Sources of Audit Information	13

Chapter 8 Operation: Basic

Client Specific Performance Objectives and Examples	1-2
DB2 Operator Commands	3-10
Where DB2 Commands are Entered	11
Entering Commands at a CICS Terminal	12
Entering Commands from a TSO Terminal	13
Authorities for DB2 Commands	14
Starting DB2	15-16
Restricting Access to Data	17
Stopping DB2	18

Chapter 9 Log and the BSDS

Client Specific Performance Objectives and Examples	1-2
Log and BSDS	3
Units of Recovery	4
Rolling Back Work	5
Creation of Log Records	6
Retrieval of Log Records	7

Chapter 11 Backup and Restore Databases

Client Specific Performance Objectives and Examples	1-2
Backup and Recovery Procedures	3
Preparing for Recovery	4
Events which Occur During Recovery	5
RECOVER	6
Overview of DB2 Recovery	7
Complete Recovery Cycles	8
Image Copies	9-10
CHANGELIMIT	11
Maximizing Data Availability	12-13
Recovery Information	14
Reporting Recovery Information	15
Preparing to Recover to a Prior Point of Consistency	16
Resetting Exception Status	17
Copying the Data	18
Establishing a Point of Consistency	19
Copying Page Sets and Data Sets	20
Restoring Data by Using DSN1COPY	21
Avoiding Accidentally Dropping Objects	22
Procedures for Recovery	23
Suggestion for Restores	24
Recovery of an Accidentally Dropped Table	25
Step 1 Recovery	26
Step 2 and 3 Recovery	27
Step 4 Recovery	28
Step 5 Recovery	29
Step 5 Recovery	30
Step 6 Recovery	31
Step 7 Recovery	32
Step 8-11 Recovery	33

Chapter 12 DB2 Performance

Client Specific Performance Objectives and Examples	1-2
Materialized Query Table	3-5
Materialized Query Table: Creation	6
Varying-length Index Keys Performance Benefits	7-8
Backward Index Scan	9
Stage 1 and Indexable Predicates	10
Mismatched Data Types	11-12
Unknown Join Sequence	13
Trigger Enhancements	14
Cost-based Parallel Sort	15
EXPLAIN Enhancements	16
DB2 Address Spaces	17-18
MSTR Address Space	19
DBM1 Address Space	20
IRLM Address Space	21
DIST Address Space	22
SPAS Address Space	23
Storage Group	24-26
Databases	27

Tablespaces	30-38
Tables	39-40
Indexes	41-43
Free Space: Pros and Cons	44
Indexes	45
Pages	46-52
Bufferpools	53-58
Access via SQL	59
SQL Types	60
Memory Usage	61-62
DBM1 Memory Usage	63-64
Memory Usage	65
DBM1 Memory Usage	66
DDCS Database	67-68
DB2 Connect Operation	69
RLST Database	70-72
Work File Database	73-74
Work File Database Usage	75-76
TEMP Database	77-78
Important Datasets	79-80
Parallel Sysplex	81
Data Sharing Group	82-83
DB2 Accounting Time	84

Chapter 13 Tuning Queries

Client Specific Performance Objectives and Examples	1-2
Are All Predicates Coded Correctly?	3
Declared Lengths of Host Variables	4
Subqueries in a Query	5
Query Involve Aggregate Functions	6
Aggregate Functions During Data Retrieval	7-8
Can a Query be Written to Use a Noncolumn Expression	9
Materialized Query Tables and Query Performance	10
Writing Efficient Predicates	11-12
Properties of Predicates	13
Predicate Definitions	14
Predicate Types	15
Indexable and Nonindexable Predicates	16
Stage 1 and Stage 2 Predicates	17
Stage 1	18
BT - Boolean Term Predicates	19
Predicates in the ON Clause	20-21
Predicate Filter Factors	22
Filter Factor	23
DB2 Uniform Filter Factors by Predicate Type	24
Interpolation Formulas	25
The Formulas	26-27
FETCH FIRST	28
OPTIMIZE FOR and FETCH FIRST	29
VOLATILE	30-31

Chapter 14 Catalog in Database Design

Client Specific Performance Objectives and Examples	1-2
DB2 Storage Groups	3
Table - Information	4
Catalog Information about Aliases	5
Columns - Information	6
Indexes - Information	7
Authorizations - Information	8
Foreign Keys - Information	9
Check-pending - Information	10
Check Constraints - Information	11
User-defined Functions and Stored Procedures	12
Triggers - Information	13
Sequences - Information	14
Comments - Adding and Retrieving	15-16
