

Chapter 1: Server Components	
Standalone and Network Configuration	1
Application Servers, Node, Node Group, and Cells	2
Servers	3
Containers	4
Application Server Services	5
Virtual Hosts	6
Session Management	7
Administration	8
Administration Tools	9
Administrative Console	9
Commands	9
Scripting Client	9
Application Packaging	10
Application Deployment	11
System Management	12
Chapter 2: System Management	
System Management Tools	1
Standalone Server Environment	2
Role-based Administration	3
JMX: Java Management Extensions	4
Repository Directory Structure	5
Chapter 3: Profiles	
Profile: Purpose and Function	1
Application Server Profile	2
Deployment Manager Profile	3
Custom Profile	4
Profile Creation Wizard	5
wasprofile Command	10
Profile Creation	11
Profile Templates	11
Chapter 4: Administrative Console	
Purpose and Function: Administrative Console	1
Access the Administrative Console	2
Logging in to the Administrative Console	3
Changing the Administrative Console Session Timeout	4
deployment.xml	5
Graphical Interface	7
Navigation Tree	8
Console Preferences - Setting	10
Preferences for Viewing the Console Page - Setting	11
Adding New Items	12
Removing Items	13

getid	7
list	7
defaults	7
AdminTask - Configuration	8
Operational Tasks	9
Viewing Installed Applications	10
Chapter 8: Configuring Resources	
JDBC Resources	1
JDBC Providers and Data Sources	2
Version 4 Data Source	3
Data Source - Creating	4
JDBC Provider - Creating	5
JDBC Data Source - Creating	8
Configure Connection Pooling Properties	9
WebSphere Application Server Data Source Properties	10
Chapter 9: Managing Web Servers	
Supported Servers	1
Plug-ins	2
Web Server: Viewing the Status	3
Start/Stop Web Servers	4
Viewing or Modifying the Web Server Configuration File	5
Viewing Web Server Logs	6
Mapping Modules to Servers	7
Chapter 10: Problem Determination	
Resources for Identifying Problems	1
Administrative Console Messages	2
Log Files	4
JVM Logs - Configuring	5
Processing Native Logs	7
IBM Service Activity Log	8
Log Analyzer	10
Product Information - Finding	12

Starting and Stopping Items	14
Variables	15
Saving Work	17
Chapter 5: Application Servers	
Standalone and Network Application Servers	1
Template - Creation	4
Application Server: Viewing the Status of an Application Server	5
Administrative Console	6
serverStatus Command	7
Application Server - Starting	8
startServer Command	9
Administrative Console: Stopping a Managed Server	10
stopServer Command	11
Customizing Application Servers	12
Web Container Settings	13
Server Infrastructure	14
Virtual Hosts	15
Managing Applications	16
Enterprise Application: Installing	17
Installed Applications - Viewing	19
Finding a URL for a Servlet or JSP	20
Chapter 6: Managing Applications	
Application Management Techniques	1
wsadmin Script	1
WebSphere Rapid Deployment	1
Administrative Console	1
Applications: Viewing and Managing	2
Enterprise Application - Installing	3
Exporting an Enterprise Application	5
Preventing an Enterprise Application from Starting on a Server	6
Viewing Installed Applications	7
Viewing Web Modules	10
Finding a URL for a Servlet or JSP	12
Chapter 7: Administration with Scripting	
WebSphere Scripting Facility	1
Commands - Invoking	2
wsadmin Objects	3
AdminControl	3
AdminConfig	3
AdminApp	4
AdminTask	4
AdminControl: Administration	5
AdminConfig	6
Commands	7
types	7
