

Chapter 1: Getting Started

Message Queuing	1
Message Queuing: Purpose and Function	1
Queueing	2
Message	2
Message Descriptor	3
Message Channel Agent	4
Queue Manager	4
Cluster	5
Shared Queue, A Queue-Sharing Group, and Intra-Group Queueing	6
WebSphere MQ Client	9
Message Queuing: Main Features	7
No Direct Connections Between Programs	8
Time-independent Communication	8
Small Programs	8
Event-driven Processing	8
Message Priority	8
Security	9
Data Integrity	9
Recovery Support	9
Message Queuing - Benefits	10
WebSphere MQ for z/OS	10
WebSphere MQ for non-z/OS Platforms	11
WebSphere MQ Objects	12
Designing Messages	13
Discarded Messages	13
Waiting for Messages	14
Starting WebSphere MQ Programs Automatically	14
Generating WebSphere Reports	15
Application Programming	16
Call Interface	17

Chapter 2: Messages

WebSphere MQ Messages	1
Types of Message	2
Datagrams	2
Request Messages	2
Reply Messages	3
Report Messages	3
Types of Report Message	4
Format of Message Control Information and Message Data	5
Format of Message Control Information	5
Format of Message Data	5
Format	6
Coded/CharSetId	6
Encoding	6
Application Data Conversion	7
Conversion at the Sending Queue Manager	7
Conversion at the Receiving Queue Manager	7
Message Priorities	8

Chapter 5: Connecting a Queue Manager

Connecting and Disconnecting a Queue Manager	1
Connecting to a Queue Manager using the MQCONN Call	2
Connecting to a Queue Manager using the MQCONNX Call	3
Disconnecting Programs from a Queue Manager using MQDISC	4
Connect to a Memory Queue	5
Disconnecting from a Queue Manager	6

Chapter 6: Open and Closing Objects

Opening and Closing Objects	1
Opening Object: MQOPEN Call	2
Identifying Objects: MQOD Structure	3
MQOPEN Call Options	4
MQOPEN Example	5
MQOPEN Option for Putting Messages	6
MQOPEN Options for Removing Messages	6
MQOPEN Options for Relating to Message Context	7
Dynamic Queue Creation	8
MSCLOSE Call: Closing Objects	9
Opening an Existing Queue	10
Closing a Queue	12

Chapter 7: Putting a Message

Putting Messages on a Queue	1
Putting Messages On a Local Queue using the MQPUT Call	2
Specifying Handles	3
Defining Messages using the MQMD Structure	4
Data in a Message	5
Passing Identity Context	6
Passing All Context	7
Setting Identity Context	7
Setting All Context	7
Putting One Message on a Queue using the MQPUT1 Call	8
Putting a Message using MQPUT	10
Putting a Message using MQPUT1	13

Chapter 8: Getting Messages

Getting Messages from a Queue	1
Getting Messages from a Queue: MQGET Call	1
Specifying MQGET Options: MQGMO Structure	2
Specifying Connection Handles	2
Describing Messages: MQMD Structure and the MQGET Call	3
Specifying MQGET Options: MQGMO Structure	3
The Options Fields Controls	4
Specifying the Size of the Buffer Area	5
Priority	5

Message Persistence	9
Messages that Fail to be Delivered	10
Messages that are Backed Out	11
Reply-To Queue and Queue Manager	12
Message Context	13
Identity Context	13
Origin Context	14

Chapter 3: WebSphere MQ Objects

WebSphere MQ Objects	1
Queue Managers	2
Attributes of Queue Managers	2
Fixed Attributes	2
Changeable Attributes	3
Queues	4
Queue Types	5
Shared Queues	5
Alias Queues	5
Model and Dynamic Queues	5
Cluster Queues	5
Local Queue Types	6
Attributes of Queues	7
Dynamic Queues	8
Transmission Queues	9
Handling Program Errors	10
Locally Determined Errors	10
Failure of an MQI Call	10
System Interruptions	11
z/OS	11
Report Messages for Problem Determination	12
Report Message Creation	12
Requesting and Receiving: MQGET - Report Messages	12

Chapter 4: Message Queue Interface

Message Queue Interface: Purpose and Function	1
Calls	2
Syncpoint Calls	3
WebSphere MQ for z/OS Calls	3
Data Conversion	3
WebSphere MQ for z/OS	4
WebSphere MQ for Windows MQ	5
What is in the MQI?	6
Structures	6
Elementary Data Types	7
WebSphere MQ for z/OS	8
Parameters Common to All the Calls	9
Connect and Object Handles	9
Return Codes	10
Reason Codes	11
Buffer Specification	17

Logical and Physical Ordering	6
Getting a Particular Message	6
Type of Index	7
Handling Messages Greater than 4 MB Long	8
Waiting for Messages	9
Signaling	10
Skipping Backout	11
Application Data Conversion	12
Conversion of EBCDIC Newline Characters	12
Browsing Messages on a Queue	13
The Browse Cursor	13
Queues in FIFO (first in, first out) Sequence	14
Queues in Priority Sequence	14
Uncommitted Messages	14
Browsing Messages When Message Length is Unknown	15
Removing a Message that has been Browsed	15
Browsing Messages in Logical Order	16
Browsing Messages in Groups	16
Getting a Message	17
Getting a Message Using The Wait Option	19

Chapter 9: Committing and Backing Out Units of Work

Committing and Backing Out Units of Work: Purpose and Function	1
Syncpoint Coordination, Syncpoint, Unit of Work	2
Syncpoints in CICS Transaction Server for z/OS and CICS for MVS/ESA Applications	3
Syncpoints in z/OS Batch Applications	4
Backing Out Changes Using the MQBACK Call	5
Transaction Management And Recoverable Resource Manager Services	6

Chapter 10: Triggers

Starting WebSphere MQ Applications using Triggers	1
What is Triggering?	2
Prerequisites for Triggering	4
Controlling Trigger Events	5
Format of Trigger Messages	6
Getting a Message using Signaling	7
Inquiring About the Attributes of an Object	10

Chapter 11: Data Types

Elementary Data Types	1
C Declarations	3
COBOL Declarations	4
Mainframe Assembler Declarations	5
Visual Basic Declarations	6
Structure Data Types Used On MQI Calls	7
