

Chapter 1: Forms

Purpose and Features	1
<FORM> Element	2
Successful Controls	4
Controls	5
Control Types	5
<INPUT> Element	7-8
Choices	9
<SELECT> Element	9
<OPTION> Element	10
Pre-selected Options	10-11
<TEXTAREA> Element	12
Get versus Post Methods	13
Get Method	13
Post Method	14

Chapter 2: Entities and Data Types

Character Entity References	1
HTML Character Entities	1
Non-breaking Space	2
Common Entities	2
HTML Data Types	3
Case Information	3
Text Strings	3
URI, URL, and URN	4
URI: Uniform Resource Identifier	4
URL and URN	4
Colors	5
Color Names and sRGB Values	5
Guidelines for Using Colors	6
Lengths	7
Link Types	8
Frame Target Names	9
Horizontal and Vertical Alignment	10
Horizontal Alignment - The align Attribute	10
Vertical Alignment - The valign Attribute	10

Chapter 3: Tables: Advanced Features

Tables	1
Tables: Grouping Data	1
Tables: Document Layout	1
Table Model	2-3
Table Elements	4
The TABLE Element	4
Information Used by User Agents	6

Chapter 6: Applets and Objects

What is an Applet?	1
JVM: Java Virtual Machine	1
Execution Layers	2
Portability	3
Applet Capabilities	4
Browser Restrictions	4
Applet Capabilities	5-6
<APPLET> Element	7-8
Parameters: Specifying	9
Alternate HTML Code and Text	9
Specifying the Applet Directory - The <CODEBASE> Parameter	10
<OBJECT> Element	11-12
Rendering Objects: Rules	13-14
Inline versus External Data	15
Specifying Parameters	15

Chapter 7: Client-side Scripting

Purpose and Features	1
The <SCRIPT> Element	1
JavaScript Capabilities	1-2
Tools	3
Common Text Editors	3
File Extension	3
Embedding Scripts	4
<SCRIPT> Element	4
Specifying a File of JavaScript Code	5
JavaScript Expressions as HTML Attribute Values	6
Hiding Scripts from Old Browsers	7
Comments	8
Terminating a Statement	8
Displaying Information in the Browser	9
document.write() and document.writeln()	9-10
Alerting the User	11-12
Redirecting the User	13
Browser Detection	14
Plug-in Detection	15

Chapter 8: Automating with JavaScript

Rollover	1
Rollovers: Creating	1
Rollover: Disadvantages	2
Cache	3
Triggering Rollovers from a Link	4-5
Cycling Banners: Creating	6
Banner Cycling: Wait for the User	7
Slide Shows	8
Random Image: Displaying	9-10
Background Colors: Changing	11

Table Directionality	7
Column Zero	7
<CAPTION> Element	8
Grouping Columns	9
<COLGROUP> Element	9
<COL> Element	10-11
Cell Margins	12-13
Spanning: Rows or Columns	14

Chapter 4: Images: Advanced Features

The Element	1-3
Visual Presentation of Images	4
Width and Height	4
White Space Around Images	4
Borders	5
Alignment	5
Floating Objects	6
Alternate Text: Specifying	7
Image Maps	8
Client-side Map	8
Server-side Map	8
<MAP> Element	9
Referencing the MAP	9
Shapes: Supported	10
Hotspot Areas: Determining	10
HTML Code: Adding	11-12
Server-side Image Maps	13

Chapter 5: Frames and Layers

Purpose and Features	1
Browser Support	2
Layout of Frames	2
Frame Related Elements	3
<FRAMESET> Element	3
<FRAME> Element	4-6
<NOFRAMES> Element	7
Specifying Target Frame Information	8
Default Target for Links: Setting	9
Target Semantics	10
Inline Frames	11
<IFRAME> Element	11-12
Layer	13
<LAYER> Element	13

Chapter 9: CSS: Cascaded Style Sheet

Purpose and Features	1
External Style Sheets	1
Multiple Style Sheets	2
Cascading Order	2
CSS Syntax	3
Grouping	4
class Selector	4
Open class Selector	6
id Selector	6
Units	7
CSS Comments	8
Style Sheet Insertion	9
External Style Sheet	9
Internal Style Sheet	10
Inline Styles	10
Multiple Style Sheets	11
Coding for Non-CSS Complaint Browsers	12
<DIV> and with CSS and HTML	13
<DIV> Element	13
 Element	14

Chapter 10: Making a Website Known

Types of Search Engines	1
Deep Search Engines	1
Standard Search Engines	2
Categorized Listings	2
Yahoo!, Bing, and Google	2
Keywords	3
Keyword Testing	3
Page Preparation	3
<TITLE> Element	4
<BODY> Element	5
<META> Elements	6
META Keywords	6
META Description	6
META Element Syntax	7
META Description	7
HTML Syntax for META Element	8
Submitting a Site to Search Engines	8
What Happens after Submission?	8
Submitting to Directories	9
