

Chapter 1: Concepts and Terminology

XML: What is it	1
XML: Where Did it Come From	1
XML: What Can I Do with it	2
XML: Getting Started	3
XML Documents and XML Files	4
Elements, Tags, and Character Data	6
Attributes	7
XML Names	8
References	9
CDATA Sections	10
Comments	11
Processing Instructions	12
XML Declaration	14
Checking Documents for Well-formedness	15

Chapter 2: Markup and Concepts

Tags	1
Documents	2
Document Prolog	2
Elements	3
Entities	4
Miscellaneous Markup	5
Namespaces	6
Namespace Syntax	6
How Parsers Handle Namespaces	8
Namespaces and DTDs	10

Chapter 3: Modeling Information and Quality Control with Schemas

XML Syntax	1
Simple Data Storage	2
Narrative Documents	3
Complex Data	4
Documents Describing Documents	5
W3C XML Schema	6
DTDs: Document Type Definitions	8
Validation	9
Element Declarations	10
Attribute Declarations	10
General Entity Declarations	11
External Parsed General Entities	12
External Unparsed Entities and Notations	13
Parameter Entities	14
Conditional Inclusion	15

Chapter 7: Xlinks

Simple Links	1
Link Behavior	1
Link Semantics	3
Extended Links	4
Linkbases	5
DTDs for XLinks	6
Base URIs	7

Chapter 8: XPointers and XInclude

XPointers on URLs	1
XPointers in Links	1
Shorthand Pointers	2
Child Sequences	3
Namespaces	4
Points	5
Ranges	6
include Element	7
Including Text Files	8
Content Negotiation	9
Fallbacks	10
XPointers	11

Chapter 9: Presentation Part I: CSS

Stylesheets	1
CSS Basics	2
Rule Matching	3
Properties	3
Levels of CSS	5
CSS Syntax	5
Associating Stylesheets with XML Documents	6
Selectors	7
Display Property	9
Pixels, Points, Picas, and Other Units of Length	10
Font Properties	11
Text Properties	12
Colors	13

Chapter 10: XSL Presentation Part II: XSL-FO

How It Works	1
Example	2
Area Model	3
Formatting Objects	4
XSL Formatting Objects	5
Structure of an XSL-FO Document	6
Laying Out the Master Pages	7
XSL-FO Properties	8
Choosing Between CSS and XSL-FO	10

Chapter 4: XML as a Document Format

SGML's Legacy	1
Narrative Document Structures	2
TEI	3
DocBook	4
OpenOffice	5
WordprocessingML	6
Document Permanence	7
Transformation and Presentation	8
XHTML	9
Direct Display of XML in Browsers	10
Authoring Compound Documents with Modular XHTML	11
Prospects for Improved Web Search Methods	12

Chapter 5: XSLT: Transformations

What is DOM?	1
Example Input Document	2
xsl:stylesheet and xsl:transform	3
Stylesheet Processors	4
Templates and Template Rules	5
Calculating the Value of an Element with xsl:value-of	6
Applying Templates with xsl:apply-templates	7
Built-in Template Rules	8
Modes	9
Attribute Value Templates	10
XSLT and Namespaces	11
Other XSLT Elements	13

Chapter 6: XPath

Data/Declarations from External Sources	1
Tree Structure of an XML Document	2
Location Paths	4
Compound Location Paths	4
Predicates	5
Unabbreviated Location Paths	6
General XPath Expressions	7
XPath Functions	8
Nodes and Trees	9
Finding Nodes	11
XPath Expressions	12
XPointer	13

Chapter 11: Transformation with XSLT

History	1
Concepts	1
Running Transformations	2
Stylesheet Element	4
Templates	5
Formatting	6

Chapter 12: XML Schemas

Overview	1
Schema Basics	2
Working with Namespaces	3
Complex Types	4
Empty Elements	5
Simple Content	6
Mixed Content	6
Allowing Any Content	7
Controlling Type Derivation	8

Chapter 13: Programming

Limitations	1
Streams and Events	2
Trees and Objects	3
Pull Parsing	4
Standard APIs	5
Choosing a Parser	6
PYX	7
SAX	8
DOM	9
Other Options	10
DOM Foundations	11
Structure of the DOM Core	11
Node and Other Generic Interfaces	12
Specific Node-type Interfaces	12
DOMImplementation Interface	13
DOM Level 3 Interfaces	14
Parsing a Document with DOM	16
Simple DOM Application	17
ContentHandler Interface	18
Features and Properties	19
Filters	20
