

Chapter 1: Introducing Oracle

| | |
|---|-------|
| Client Specific Performance Objectives and Examples | 1-2 |
| How DBAs Spend their Time | 3 |
| Types of Database | 4 |
| OLTP | 5 |
| ODS: Operational Data Store | 6 |
| Data Warehouse | 7-8 |
| Data Marts | 9 |
| Applications | 10 |
| Oracle DBA | 11 |
| DBA Roles | 12-16 |
| DBA Tasks | 17-20 |
| Islands of Computation | 21 |
| Grid Computing | 22 |
| Grid Vision | 23 |
| Database Management Challenges | 24 |
| Oracle Grid Architecture | 25 |
| Architect a Database | 26 |
| Physical Database Structures | 27 |
| Oracle Database | 28 |
| Datafiles | 29 |
| Control Files | 30 |
| Redo Log Files | 31 |
| Archive Log Files | 32 |
| Parameter Files | 33 |
| Alert and Trace Log Files | 34 |
| Logical Database Structures | 35 |
| The Logical World | 36 |
| Database Structures | 37 |
| Internal Database Structures | 38-42 |
| Tablespaces | 43 |
| Segments | 44 |
| Schemas | 45-46 |
| Oracle Data Dictionary | 47 |
| Oracle Instance | 48-49 |
| Instance Memory Structures | 50 |
| Oracle Background Processes | 51 |
| Oracle Net Services | 52 |
| Network Connections | 53 |
| Starting Up the Database | 54 |
| Oracle Tools | 55 |
| Enterprise Manager | 56 |
| SQL*Plus | 57 |
| Database Backup and Recovery | 58 |
| Security | 59 |
| Application Development | 60 |
| Utilities | 61 |

Oracle Database Administration

Table of Contents

| | |
|--|-------|
| Function | 32 |
| Benefits of Using Procedures and Functions | 33 |
| Unnamed Block | 34 |
| Named Procedure | 35 |
| Passing Data | 36 |
| Packages | 37 |
| List Procedures and Functions | 38-40 |
| Drop Procedures and Functions | 41 |
| Discovering Errors | 42 |
| Printing Variables | 43 |
| Cursors | 44 |
| Attributes | 45 |
| SQL Example | 46 |
| Explicit Cursors | 47 |
| Command Statements | 48 |
| DECLARE and OPEN | 49 |
| FETCH | 50 |
| CLOSE | 51 |
| Looping thru a Cursor | 52 |
| WHERE CURRENT OF | 53 |
| Exception / Error Handling | 54-56 |
| EXCEPTION Functions | 57 |
| RAISE | 58 |

Chapter 4: Oracle Instance

| | |
|---|-------|
| Client Specific Performance Objectives and Examples | 1-2 |
| Instance and Instance Management | 3 |
| Initialization Parameters | 4 |
| Instance and Database | 5 |
| SGA: System Global Area | 6 |
| PGA: Program Global Area: PGA | 7 |
| Background Processes | 8-9 |
| Startup Process | 10 |
| PFILE | 11 |
| Start an Instance Modes | 12 |
| Starting Commands | 13 |
| Altering Database Availability | 14 |
| Shutting Down a Database | 15-16 |
| Quiescing a Database | 17 |
| Suspending and Resuming a Database | 18 |

Chapter 2: SQL*Plus

| | |
|---|-------|
| Client Specific Performance Objectives and Examples | 1-2 |
| What is SQL*Plus | 3 |
| Start SQL*Plus | 4 |
| iSQL*Plus Session | 5 |
| Connecting to a Different Database | 6 |
| Unlocking the Sample Tables | 7 |
| Configuring SQL*Plus | 8 |
| Site Profile | 9 |
| Global Login | 10-11 |
| Entering and Executing Commands | 12-13 |
| The SQL Buffer | 14 |
| DESCRIBE Command | 15 |
| Ending a SQL Command | 16 |
| Stopping a Command while it is Running | 17 |
| Running Operating System Commands | 18 |
| Saving Changes to the Database Automatically | 19 |
| Line Edit | 20 |
| Formatting Columns | 21 |
| Column Heading | 22 |
| Formatting NUMBER Columns | 23 |
| Starting and Mounting | 24 |
| Opening the Database | 25 |
| Shutting Down a Database | 26 |
| SQL*Plus Command Reference | 27 |

Chapter 3: PL/SQL: Introduction

| | |
|---|-------|
| Client Specific Performance Objectives and Examples | 1-2 |
| What is PL/SQL? | 3 |
| Why PL/SQL? | 4 |
| What PL/SQL Limitations | 5 |
| PL/SQL Components | 6 |
| PL/SQL Structure | 7-9 |
| Declaring Variables and Constants | 10 |
| Variables and Types | 11-12 |
| Type | 13 |
| ROWTYPE | 14 |
| Assign Values | 15 |
| PL/SQL Assignments | 16 |
| Simple Programs | 17-18 |
| Control Flow | 19-20 |
| LOOP | 21-22 |
| Other Useful Loop-forming | 23 |
| Processing Control Structures | 24-27 |
| Cursors | 28-29 |
| Procedures | 30-31 |

Oracle Database Administration

Table of Contents

Chapter 5: Database Creation

| | |
|--|-------|
| Client Specific Performance Objectives and Examples | 1-2 |
| Create an Oracle Database | 3 |
| Creating the Database | 4 |
| Decide on the Instance Identifier – SID | 5 |
| Database Administrator Authentication Method | 6 |
| Create the Initialization Parameter File | 7 |
| Initialization Parameter File | 7-9 |
| Connect to the Instance | 10 |
| Create a Server Parameter File | 11 |
| Start the Instance | 12 |
| Issue the CREATE DATABASE | 13-14 |
| Create Additional Tablespaces | 15 |
| Run Scripts to Build Data Dictionary Views | 16 |
| CREATE DATABASE Statement | 17 |
| Specifying Oracle-Managed Files at Database Creation | 18 |
| Determining the Global Database Name | 19 |
| DB_NAME Initialization Parameter | 20 |
| Specifying a Flash Recovery Area | 21 |
| Specifying Database Block Sizes | 22 |
| DB_BLOCK_SIZE | 23-25 |
| Components and Granules in the SGA | 26 |
| V\$SGAINFO | 27 |
| Viewing Information About the SGA | 28 |
| Specifying the Maximum Number of Processes | 29 |
| Dropping a Database | 30 |
| What is a Server Parameter File? | 31 |
| Creating a Server Parameter File | 32 |
| SFILE Name and Location | 33 |

Chapter 6: Control File

| | |
|---|-----|
| Client Specific Performance Objectives and Examples | 1-2 |
| What is a Control File | 3 |
| Control File Backup | 4 |
| Control File Filenames | 5 |
| Two Control Files | 6 |
| Back Up Control File Files | 7 |
| Creating Initial Control Files | 8 |
| Creating Additional Copies | 9 |
| To Add a Multiplexed Copy | 10 |
| When to Create New Control Files | 11 |
| CREATE CONTROLFILE | 12 |
| Steps for Creating New Control Files | 13 |
| Backing Up Control Files | 14 |
| Displaying Control File Information | 15 |

Chapter 7: Managing Tablespaces

| | |
|---|-------|
| Client Specific Performance Objectives and Examples | 1-2 |
| Multiple Tablespaces | 3 |
| Creating Tablespaces | 4-5 |
| Locally Managed Tablespaces | 6-7 |
| Creating a Locally Managed Tablespace | 8 |
| CREATE TABLESPACE | 9 |
| Bigfile Tablespaces | 10-12 |
| Creating a Bigfile Tablespace | 13 |
| Dictionary-Managed Tablespaces | 14 |
| Creating a Dictionary-Managed Tablespace | 15 |
| Monitoring Free Space | 16 |
| Temporary Tablespaces | 17 |
| Creating a Locally Managed Temporary Tablespace | 18 |
| Read-Only Tablespaces – Using | 19 |
| Making a Tablespace Read-Only | 21-22 |
| ALTER TABLESPACE | 23 |

Chapter 8: Space for Schema

| | |
|---|-----|
| Client Specific Performance Objectives and Examples | 1-2 |
| Data Blocks | 3 |
| PCTFREE Parameter: Specifying | 4 |
| PCTFREE: Smaller Specifying – Effects | 5 |
| PCTFREE: Larger Specifying – Effects | 6 |
| Space: Usage of Datatypes | 7 |
| Views to Display Information About Space Usage | 8 |
| Space Use of a Table: Estimating | 9 |

Chapter 9: Tables

| | |
|---|-------|
| Client Specific Performance Objectives and Examples | 1-2 |
| Tables | 3 |
| Design Tables | 4 |
| Table Types | 5 |
| Location of Each Table | 6 |
| Consider Using NOLOGGING | 7 |
| Table Compression | 8 |
| Creating Tables | 9 |
| Creating a Table | 10 |
| Creating a Temporary Table | 11-12 |
| Inserting Data into Tables | 13-14 |
| Advantages of Using Direct-Path INSERT | 15 |
| Enabling Direct-Path INSERT | 16 |
| Automatically Collecting Statistics on Tables | 17 |

Chapter 11: Views, Sequences, and Synonyms

| | |
|---|-----|
| Client Specific Performance Objectives and Examples | 1-2 |
| Views: Definition and Purpose | 3 |
| Creating Views | 4-5 |
| Managing Sequences | 6 |
| CREATE SEQUENCE Command | 7 |
| Sequence Parameters | 8 |
| Sequences – Using | 9 |
| Referencing a Sequence | 10 |
| Using Sequence Numbers with CURRVAL | 11 |
| Caching Sequence Numbers | 12 |
| Managing Synonyms | 13 |
| Creating Synonyms | 14 |
| Viewing Information | 15 |

Chapter 12: Redo Log

| | |
|---|-----|
| Client Specific Performance Objectives and Examples | 1-2 |
| Function of Redo Log | 3 |
| Redo Threads | 4 |
| Redo Log Contents | 5 |
| Writing Redo Records | 6 |
| Circular Log | 7 |
| Active (Current) and Inactive Redo Log Files | 8 |
| Multiplexing Redo Log Files | 9 |
| Placing Redo Log Members | 10 |
| Setting the ARCHIVE_LAG_TARGET | 11 |
| Creating Redo Log Groups and Members | 12 |
| Creating Redo Log Groups | 13 |
| Creating Redo Log Members | 14 |
| Forcing Log Switches | 15 |
| Clearing a Redo Log File | 16 |
| Viewing Redo Log Information | 17 |

| | |
|---|-------|
| Reasons for Using the ALTER TABLE Statement | 18 |
| Moving a Table to a New Segment or Tablespace | 19-20 |
| Adding Table Columns | 21 |
| Renaming Table Columns | 22 |
| Dropping Table Columns | 23 |
| Marking Columns Unused | 24-25 |
| Removing Unused Columns | 26 |
| Dropping Tables | 27 |
| What is the Recycle Bin? | 28 |
| Purging Objects in the Recycle Bin | 29 |
| Restoring Tables from the Recycle Bin | 30 |
| What are Index-Organized Tables? | 31 |
| Index-Organized Tables | 32 |
| Creating Index-Organized Tables | 33 |
| Create Index-Organized Tables | 34 |
| Analyzing Index-Organized Tables | 35 |
| Managing External Tables | 36-37 |
| Creating External Tables | 38-42 |
| Viewing Information About Tables | 43 |

Chapter 10: Indexes

| | |
|---|-----|
| Client Specific Performance Objectives and Examples | 1-2 |
| Indexes: Definition and Purpose | 3 |
| Indexing Schemes | 4 |
| Create Indexes After Inserting Table Data | 5 |
| Create Index | 6 |
| Strong Candidates for Indexing | 7 |
| Order Index Columns for Performance | 8 |
| Drop Indexes that are No Longer Required | 9 |
| Specify the Tablespace for Each Index | 10 |
| Creating an Index Explicitly | 11 |
| Creating a Unique Index Explicitly | 12 |
| Creating a Large Index | 13 |
| Creating a Function-Based Index | 14 |
| Creating a Key-Compressed Index | 15 |
| Monitoring Index Usage | 16 |
| Monitoring Space Use of Indexes | 17 |
| Viewing Index Information | 18 |

Chapter 13: Backup and Recovery

| | |
|---|-----|
| Client Specific Performance Objectives and Examples | 1-2 |
| Physical Backup | 3 |
| Logical-Level Backups | 4 |
| Consistent and Inconsistent Backups | 5-6 |
| RMAN Repository | 7 |
| Flash Recovery Area | 8 |
| Recording the DBID and DB_UNIQUE_NAME | 9 |
| Full Backups of Datafiles | 10 |
| Incremental Backups of Datafiles | 11 |
| Restore and Recovery Operations | 12 |
| Recovering a Whole Database from Backup | 13 |

Chapter 14: Java for the DBA

| | |
|---|-----|
| Client Specific Performance Objectives and Examples | 1-2 |
| What is Java? | 3 |
| Why Java? | 4 |
| What is an Object? | 5 |
| Hello, World | 6-7 |
| Methods | 8 |
| Development Tools | 9 |
| JDK: Java Development Kit | 10 |
| What is JDBC? | 11 |
| Installation of JDBC | 12 |
| JDBC Drivers | 13 |
| JDBC Classes | 14 |
| DriverManager | 15 |
| Statement | 16 |
| Prepared Statement | 17 |
| Callable Statement | 18 |
| ResultSet | 19 |
