

**Chapter 1: Control Structures**

|   |       |
|---|-------|
| IF Statements                             | 1     |
| Simple IF Statements                      | 2     |
| Compound IF Statements                    | 3     |
| IF-THEN-ELSE Statement Execution Flow     | 3     |
| Nested IF Statements                      | 4     |
| CASE Expressions                          | 5-7   |
| Handling Nulls                            | 8     |
| Boolean Conditions with Logical Operators | 9     |
| Iterative Control: LOOP Statements        | 10-11 |
| Basic Loops                               | 10    |
| WHILE Loops                               | 12    |
| FOR Loops                                 | 13-14 |
| Guidelines for using Loops                | 15    |
| Nested Loops and Labels                   | 16    |
| EXIT Statement                            | 17    |

**Chapter 2: Composite Data Types**

|   |       |
|---|-------|
| Composite Data Types                          | 1     |
| Types of Composite Data Types                 | 1     |
| RECORD and TABLE Data Types                   | 1     |
| PL/SQL Records                                | 2     |
| Creating a PL/SQL Record                      | 2-3   |
| PL/SQL Record Structure                       | 4     |
| Declaring Records with the %ROWTYPE Attribute | 5     |
| Dot Notation                                  | 6     |
| Assigning Values to Records                   | 6     |
| %ROWTYPE Advantages                           | 6-7   |
| INDEX BY Tables                               | 8     |
| INDEX BY Table Structure                      | 8     |
| INDEX BY Table - Creation                     | 9     |
| Referencing an INDEX BY Table                 | 9     |
| INDEX BY Table Methods                        | 10    |
| INDEX BY Table Methods                        | 10-11 |
| INDEX BY Table of Records                     | 12    |
| Referencing a Table of Records                | 13    |

**Chapter 3: Explicit Cursors**

|                               |     |
|-------------------------------|-----|
| Types of Cursors              | 1   |
| Implicit and Explicit Cursors | 1   |
| Explicit Cursors              | 1   |
| Controlling Explicit Cursors  | 2   |
| Declaring a Cursor            | 3   |
| Opening the Cursor            | 4   |
| OPEN Statement                | 4   |
| Fetching Data from the Cursor | 5   |
| FETCH Statement Guidelines    | 5-6 |
| Closing the Cursor            | 7   |
| Cursor - Status Information   | 8   |

**Chapter 6: Oracle Objects**

|   |       |
|---|-------|
| Abstraction                                 | 1     |
| Object Types                                | 2     |
| Components of an Object Type                | 3     |
| Methods                                     | 4     |
| Parameter SELF                              | 5-6   |
| Overloading                                 | 7     |
| Constructor Methods                         | 8     |
| Object Types - Definition                   | 9     |
| Objects - Declaring and Initializing        | 10    |
| Initializing Objects                        | 11    |
| Uninitialized Objects - Treatment by PL/SQL | 12    |
| Accessing Attributes                        | 13    |
| Constructor Definition                      | 14-15 |
| Calling Constructors                        | 16    |
| Calling Methods                             | 17    |
| Sharing Objects through the REF Modifier    | 18-19 |
| Manipulating Objects                        | 20    |
| Function VALUE                              | 21    |
| Object Insertion                            | 22-23 |
| Object Updating                             | 24    |
| Object Deletion                             | 25    |
| PL/SQL Type Inheritance                     | 26    |
| Example: PL/SQL Type Inheritance            | 27    |

**Chapter 7: Compiling PL/SQL Code**

|  |     |
|--|-----|
| Compiling PL/SQL Code for Native Execution                 | 1-2 |
| ALTER SYSTEM / ALTER SESSION Command                       | 3   |
| Interpreted and Native Compilation Modes: Choosing         | 4   |
| Example: Compiling a PL/SQL Procedure for Native Execution | 5   |

**Chapter 8: Table and Table Functions**

|   |      |
|---|------|
| Table Functions - Accepting and Returning Multiple Rows                               | 1    |
| Table Performance   | 2    |
| Pipelined Table Functions   | 3    |
| Pipelined Table Functions and Transformations   | 4    |
| Writing a Pipelined Table Function  | 5    |
| Returning Results from Table Functions  | 6    |
| Querying Table Functions  | 7    |
| Fetching from the Results of Table Functions  | 8    |
| Cursor Expressions  | 9    |
| Cursor Variables  | 9-10 |
| Oracle Enhancement for Bulk Fetch from Cursor Variable Assigned by Native Dynamic SQL | 11   |
| Manipulating Cursor Expressions in PL/SQL   | 12   |

|  |       |
|--|-------|
| %ISOPEN Attribute                                  | 8     |
| %NOTFOUND Attribute                                | 9     |
| %ROWCOUNT Attributes                               | 9-10  |
| Controlling Multiple Fetches from Explicit Cursors | 11    |
| Cursors and Records                                | 12    |
| Cursor FOR Loops                                   | 13    |
| Cursor FOR Loops Using Subqueries                  | 14-15 |
| Cursors with Parameters                            | 16    |
| FOR UPDATE Clause                                  | 17    |
| WHERE CURRENT OF Clause                            | 18    |

**Chapter 4: Programming Style**

|   |       |
|---|-------|
| Coding Style                                    | 1     |
| Fundamentals of Effective Layout                | 2     |
| Indentation                                     | 2     |
| Case for Aiding Readability                     | 3-4   |
| UPPER-lower Style                               | 5     |
| Formatting Single Statements                    | 6     |
| One Statement Per Line                          | 6     |
| White Space Inside a Statement                  | 7     |
| Formatting Declarations                         | 8     |
| Placing One Declaration on Each Line            | 8     |
| Alignment for Declarations                      | 8-9   |
| Formatting Multi-line Statements                | 10    |
| Formatting SQL Statements                       | 11    |
| Right-aligning the Clauses                      | 11    |
| Line Separators                                 | 12    |
| Meaningful Abbreviations for Column Aliases     | 12-13 |
| Formatting Control Structures                   | 14    |
| Formatting IF Statements                        | 14-16 |
| Formatting Loops                                | 17    |
| Formatting Exception Handlers                   | 18    |
| Formatting PL/SQL Blocks                        | 19-20 |
| Formatting Packages                             | 21-22 |
| Comments  | 23-24 |
| Commenting While Coding                         | 25    |
| Explaining the Why - Not the How - of a Program | 25-26 |
| Making Comments Easy to Enter and Maintain      | 27    |
| Indentation                                     | 28-30 |
| Documenting the Entire Package                  | 31    |
| Package Specification - Documenting             | 32    |
| Documenting the Package Body                    | 33    |

**Chapter 5: CASE Expressions**

|  |   |
|--|---|
| CASE Statements in PL/SQL programs                 | 1 |
| CASE Expressions                                   | 2 |
| Searched CASE Statement and Search CASE Expression | 3 |
| CASE_NOT_FOUND Exception                           | 4 |
| CASE Expressions                                   | 5 |
| Searched CASE Expression                           | 6 |

**Chapter 9: Bulk and FORALL**

|   |       |
|---|-------|
| Loop Overhead for Collections with Bulk Binds                                 | 1     |
| Bulk Binds and Performance  | 2-3   |
| FORALL Statement  | 4-5   |
| Counting Rows Affected by FORALL Iterations with the %BULK_ROWCOUNT Attribute | 6-7   |
| Handling FORALL Exceptions with the %BULK_EXCEPTIONS Attribute                | 8-9   |
| Restrictions on FORALL  | 10-11 |
| Retrieving Query Results into Collections with the BULK COLLECT Clause        | 12-13 |
| Example - Bulk Fetch from a Cursor  | 14    |
| LIMIT Clause - Limiting the Rows for a Bulk FETCH Operation                   | 15    |
| Retrieving DML Results into a Collection with the RETURNING INTO Clause       | 16    |
| BULK COLLECT - Restrictions   | 17    |
| FORALL and BULK COLLECT: Using Together                                       | 18    |

**Chapter 10: Bulk Binding Enhancements and Session Settings**

|   |     |
|---|-----|
| Bulk Binding - Purpose and Function         | 1   |
| Handling and Reporting Exceptions           | 2   |
| Alter Session                               | 4   |
| Initialization Parameters and ALTER SESSION | 5-6 |
| Defining                                    | 7   |

**Chapter 11: Multilevel Collections**

|   |     |
|---|-----|
| Varray and Nested Table   | 1-2 |
| Oracle Enhancements   | 3   |
| Multilevel Collection Types                                     | 4   |
| Constructors for Multilevel Collections                         | 5   |
| Associative Arrays  | 6   |
| Utl_File  | 7   |
| Create the UTL_FILE_TEST DIRECTORY and the PROGRAMMER test user | 8   |
| Opening, Writing, and Closing                                   | 9   |

**Chapter 12: Sending E-mail**

|  |     |
|--|-----|
| E-mail - Sending with the Utl_Smtp Package | 1-8 |
| Maildemo.sql                               | 9   |

**Chapter 13: Autonomous Transactions**

|                                 |     |
|---------------------------------|-----|
| Database Transaction            | 1   |
| Distributed Transaction Defined | 2   |
| Autonomous Transaction          | 3-4 |
| Autonomous Transaction Rules    | 5   |

|  |       |
|--|-------|
| <b>Chapter 14: Pipes</b>   |       |
| DBMS_PIPEs .....   | 1     |
| Pipe - Loading .....   | 2     |
| Example: Loading a Pipe with a Row of Two Columns .....              | 2     |
| Pipe - Getting Data From .....                                       | 3     |
| Example: Reading a Pipe for One Row of Two Columns .....             | 4     |
| Simple Driver .....  | 5     |
| Main Procedure for Loading and Reading from Pipe .....               | 6     |
| Pipes Types .....  | 7     |
| Dbms_Pipe Package .....  | 8     |
| <br>   |       |
| <b>Chapter 15: External Tables</b>                                   |       |
| Purpose and Function .....   | 1     |
| Creating the Flat Files, Which will be Queried .....                 | 2     |
| Directory Object - Creating Where the Flat Files will Reside .....   | 3     |
| Metadata - Creating for the External Table .....                     | 3     |
| Querying Data .....  | 4     |
| View Creation .....  | 5     |
| Table Population - INSERT Command .....                              | 6     |
| External Tables - Dropping .....                                     | 6     |
| <br>   |       |
| <b>Chapter 16: External Packages/Procedures</b>                      |       |
| External Procedures and Pipes .....                                  | 1     |
| Example - External Procedure .....                                   | 2-3   |
| Architecture .....   | 4     |
| External Procedure - Advantages .....                                | 5     |
| External Procedure - Limitations .....                               | 6     |
| <br>   |       |
| <b>Chapter 17: Java and PL/SQL</b>                                   |       |
| Java - Calling from PL/SQL .....                                     | 1-2   |
| PL/SQL - Calling from Java .....                                     | 3     |
| <br>   |       |
| <b>Chapter 18: Web Applications</b>                                  |       |
| What is a PL/SQL Web Application? .....                              | 1     |
| HTML Output from PL/SQL - Generating .....                           | 2     |
| Passing Parameters to a PL/SQL Web Application .....                 | 3     |
| Passing List and Dropdown List Parameters from an HTML Form .....    | 3     |
| Passing Radio Button and Checkbox Parameters from an HTML Form ..... | 4     |
| Passing Entry Field Parameters from an HTML Form .....               | 5-6   |
| Passing Hidden Parameters .....                                      | 7     |
| Submitting a Completed HTML Form .....                               | 7     |
| Handling Missing Input from an HTML Form .....                       | 8     |
| Maintaining State Information Between Web Pages .....                | 8     |
| Sending E-Mail from PL/SQL .....                                     | 9     |
| Getting a Host Name or Address from PL/SQL .....                     | 10    |
| Retrieving the Contents of an HTTP URL from PL/SQL .....             | 10-13 |

|  |       |
|--|-------|
| Tables, Image Maps, Cookies, CGI Variables, etc.....                         | 14    |
| Embedding PL/SQL Code in Web Pages - PL/SQL Server Pages .....               | 15    |
| Choosing Between PSP and the PL/SQL Web Toolkit .....                        | 15    |
| Format of the PSP File .....   | 16    |
| Accepting User Input .....   | 16    |
| Displaying HTML .....  | 16    |
| Returning XML, Text, or Other Document Types .....                           | 17    |
| Returning Pages Containing Different Character Sets .....                    | 17    |
| Handling Script Errors .....   | 17    |
| Contents of PSP Script .....   | 18    |
| PL/SQL Stored Procedure in a PSP Script .....                                | 18    |
| Including the Contents of Other Files in a PSP Script .....                  | 18    |
| Declaring Variables in a PSP Script .....                                    | 18    |
| Specifying Executable Statements in a PSP Script .....                       | 19    |
| Substituting an Expression Result in a PSP Script .....                      | 19    |
| Conventions for Quoting and Escaping Strings in a PSP Script .....           | 19    |
| Comments in a PSP Script .....   | 20    |
| Retrieving a Result Set from a Query in a PSP Script .....                   | 21    |
| Syntax: PL/SQL Server Page Elements .....                                    | 22    |
| Page Directive .....   | 22    |
| Procedure Directive .....  | 22    |
| Parameter Directive .....  | 23    |
| Include Directive .....  | 23    |
| Declaration Block .....  | 23    |
| Code Block - Scriptlet .....   | 24    |
| Expression Block .....   | 24    |
| Loading the PL/SQL Server Page into the Database as a Stored Procedure ..... | 25    |
| Running a PL/SQL Server Page through a URL .....                             | 26    |
| PL/SQL Server Pages - Examples .....   | 27    |
| Sample Table .....   | 27    |
| Dumping the Sample Table .....   | 28    |
