

Chapter 1: Getting Started

System Administration: BEA WebLogic Environment	1
WebLogic Server Domains	2
BEA WebLogic Server Domain - Model	3-4
WebLogic Cluster	5
WebLogic Server System Administration Infrastructure	6
Administration Mbeans	7
Configuration Mbeans	7
Runtime Mbeans	7
Administration Server and Managed Servers	8
Managed Server Independence	8
Domain-Wide Administration Port	9
System Administration Tools	10
System Administration Tools - Security	10
System Administration Console	11
Command-line Interface	12
Configuration Wizard	12
Configuration Template Builder	13
Java Utilities	14
WebLogic Server Domain Resources	15
Servers	15
Clusters	15
Machines	16
Network Channels	16
JDBC: Java Database Connectivity	16
JMS: Java Message Service	17
WebLogic Messaging Bridge	17
Web Servers and Web Components	17
Applications Resource	18
Application Formats	19
Services	20
Administration Console: Starting	21
WebLogic Server and Other Web Servers	22
Monitoring	23

Chapter 2: WebLogic Server Fundamentals

WebLogic Server Capabilities	1-3
WebLogic Runs on Various Platforms	4
WebLogic Platform	5
Components of the WebLogic Platform	6
Distributed Environment	7
The Administration Server and Managed Servers	8
System Administration Tools	9
What is a Domain?	10
Production and Development Modes	11
Server Name Considerations	12
Domain Creation Using the Configuration Wizard	13
Domain Creation using the weblogic.Server Command	14-16
Domain Creation: Using Ant Tasks	17
Configuration Wizard: Starting	18
Create a New Configuration	19

Chapter 4: JSP: JavaServer Pages

JSP: Purpose and Facilities	1
Evolution of Web-based Applications	2
CGI	3
Other Technologies	4
JSP Portability	5
Processing	6
Access Models: Client to JavaServer Page	7
Access Models: Client to Servlet	8
Guidelines for Choosing Access Models	9
Coding a JavaServer Page	10
Writing a JSP File	11-12
Storing the JSP File	13
Testing the JSP File	14
Web Development with JavaServer Pages Technology	15
Separating Content Generation from Presentation	15
Reusable Components	16
Page Development with Tags	16
Memory Management and Security	16
Enterprise-class Scalability and Performance	16
JSP Page: Typical Code	17
Page Components	18
JSP Directives	19
JSP Tags	20
Scripting Elements	21
Application Models for JSP Pages	22
A Simple Application	22
A Flexible Application with Java Servlets	23
Scalable Processing with Enterprise JavaBeans Technology	23
Integrating XML Technology in JSP Pages	24
Java APIs: Java Technology and the Java Family of Products	25
Write Once, Run Anywhere	25
JSP Extends Servlets	25

Chapter 5: WebLogic Server Domains

Domain	1
Contents of a Domain	1
Production and Development Modes	2
Domain Creation - New	3
Domain Creation Wizard	3
weblogic.Server Command	4
Ant Tasks	5
Administration Server	6
Administration Server Failure	7
Managed Servers and Clustered Managed Servers	8
Resources and Services	9
Common Domain Types	10
Domain with Managed Servers	10
Standalone Server Domain	10
Domain Restrictions	11
Directory Structure	12

Configuration Template	20
Express or Custom Configuration	21
Administrator Username	22
Start Mode	23
Configuration Name	24
Directory of C:\bea\user_projects\domains\sysedDomain	25
setEnv.cmd	26
startWebLogic.cmd	27-28
Config.xml	29
Custom Configuration	30
Configure Server	31
Distribute Configuration	32
Database Options	33
JMS Options	34
Administrator Username and Password	35
Configure Users and Groups	36
Specify New User	37
Assign Users to Groups	38
Assign Users and Groups to Global Roles	39
Configure Windows Options	40
Start Menu Entries	41
Server Start Mode	42
Create Configuration	43
Config.xml	44
Domain-wide Administration Port	45-46
Administration Console: Starting	47
Login to Console	47
Console Window	48

Chapter 3: HTML Documents

What is HTML?	1
HTML Tags	1
Paired Tags	1-2
Hyperlinks	3
Naming a Hyperlink Destination	3
Sections and Paragraphs	4
Section Heading	4
Paragraph Format	5
Character Formatting	6
Character Size and Position	7
Changing the Font	7-8
Images and Multimedia	9
Image Alignment	9
Inserting Video Clips	10
Background Sounds	10
Frames	11
Nested Frames	12
Tag Attributes	13

config.xml File	12
Domain Directory Structure	12
Server Root Directory	13
Specifying a Server Root Directory	14
Server Root Directory for an Administration Server	15
Server Root Directory for a Managed Server Started with Node Manager	16
Server Root Directory for a Managed Server Not Started with Node Manager	16

Chapter 6: Domain Creation and Configuration

Starting the Configuration Wizard	1
GUI Environment	1
Starting in a Text-Based Environment	2
Choosing a Domain Configuration Template	3
BEA Configuration Templates	3
Additional Templates	3
Completing the Remaining Steps of the Configuration Wizard	4-5
Domain with a Single Server Instance	4
Default Characteristics	6
Accessing the Administration Console	7
Domain with Administration Server and Clustered Managed Servers	8-12
Default Characteristics	13
Accessing the Administration Console	14

Chapter 7: Node Manager

Purpose and Function	1
Node Manager Logs	1-2
Node Manager Architecture	3
Node Manager Environment	4
Node Manager Process	4
Node Manager as an Operating System Service	5
Node Manager: Invoking	5
SSL and Node Manager	6
Native Support for Node Manager	6
Node Manager Capabilities	7
Start Managed Servers	7
Suspend or Stop Managed Servers	8
Shut Down Failed Managed Servers	8
Restart of Crashed and Failed Managed Servers	8
Prerequisites for Automatic Restart of Managed Servers	9
Node Manager Communications for Lifecycle Operations	10-11
Node Manager Communications to Start a Managed Server	12
Node Manager Communications to Shut Down a Managed Server	12-13
Node Manager Communications to Restart a Managed Server	14
Re-establishing Communications After a Failure	14

Chapter 8: Managing Node Manager

Node Manager Configuration	1
Default Configuration for Development Environment	1-2
Configuration Checklist for Production Environment	3
Node Manager Hosts File	4
Startup Service	5
Node Manager: Configuring a Machine for Use	6
Managed Server Startup Arguments: Configuring	6
Administration Server: Address Definition	6
SSL: Configuring for Node Manager	7
nodemanager.properties	7
Node Manager: Starting and Stopping	8
Node Manager: Starting as a Service	8
Node Manager: Starting with Commands or Scripts	8
Command Syntax for Starting Node Manager	9
Node Manager Environment Variables	10
Node Manager Properties	11-13
Server Properties	14
Stopping Node Manager	14
Node Manager: Troubleshooting	15
Node Manager Log Files	15
Managed Server Log Files	15
Node Manager Client Logs	16
Correcting Common Problems	17

Chapter 9: Server Setup

Setting up a Windows Service	1
Server-specific Script: Creation	2-4
Configuring a Connection to the Administration Server	5-6
Managed Servers Required to Start After Administration Servers	7-8
Graceful Shutdowns from the Windows Control Panel	9-10
Java Class that Shuts Down a Server Instance	11-12
Redirecting Standard Out and Standard Error to a File	13
Classes: Adding to the Classpath	14-15
Server-specific Script - Running	16

Chapter 10: Web Server Components

WebLogic Web Server Components: Configuration	1
HTTP Parameters	1
Attributes	2-3
Listen Port: Configuration	4-5
Administration Console: Configuration	4
Web Applications	6
Web Applications and Clustering	6
Default Web Application: Designation	7
Virtual Hosting: Configuration	8
Virtual Hosting and the Default Web Application	9
Virtual Host: Set Up	10-11

HTTP Requests: Resolution by WebLogic	12-13
HTTP Access Logs: Set Up	14
Log Rotation	14
Common Log Format	15
HTTP Access Logs - Extended Log Format	16
Fields Directive	16
Field Identifiers - Supported	17
Custom Field Identifiers	18

Chapter 11: Monitoring Server Domain

Facilities for Monitoring WebLogic Server	1
Administration Console	1
Server Self-Health Monitoring	2
Server Health: Obtaining Programmatically	2
Messages and Log Files	3-4
Domain Monitoring	5
Server Monitoring	6-10
Clusters Monitoring	11
Machine Monitoring	12
Deployments Monitoring	13-14
Services Monitoring	15

Chapter 12: EJB and WebLogic

What is an Enterprise Bean?	1-3
EJB Characteristics	4-5
Three Types of Enterprise Beans	6
Entity Bean	7-9
Session Bean	10
Stateful and Stateless	11-12
Message-driven Bean	13-14
Local versus Remote EJB Clients	15-16
Local EJB Clients	17-19
Remote EJB Clients	20-21
Client Access with Interfaces	22
Using RMI to Communicate with EJBs	23-24
What are Stubs and Skeletons?	25-27
Deciding Whether to Use a Local or Remote Client	28
The Local Model Normally will Provide Better Performance	29-30
Fine-Grained Access is Better with the Local Model	31
The Remote Model Provides Better Location Transparency	32
Remote Clients Must Deal with Remote Exceptions	33
Passivation and Activation	34-35
Object Pooling	36-38
Packaging Web Components	39-40
Directory Structure	41-42
Creating a WAR	43
Naming Conventions for Enterprise Beans	44
The Life Cycles of Enterprise Beans	45-46
The Life Cycle of a Stateful Session Bean	47-51
The Life Cycle of an Entity Bean	52-58
The Life Cycle of a Message-Driven Bean	59

Chapter 13: XML in the WebLogic Environment

XML and WebLogic	1
JAXP	2
SAX	3
DOM	4
XSL Transformers	5
External Entity Resolution	6
Built-in Processors	7
XML Registry	8-9
XML Registry: Creation	10
Caching Entities	11
XML Application Scoping	12
WebLogic's Streaming API	13

Chapter 14: Recovering Failed Servers

WebLogic Server Self-Health Monitoring	1
Managed Server Independence Mode	1
MSI Mode and the Managed Servers Root Directory	2
MSI Mode and the Security Realm	2
MSI Mode and SSL	3-4
Backing Up Configuration and Security Data	5
Backing Up config.xml	5
WebLogic Server Archives Previous Versions of config.xml	5
WebLogic Server Archives config.xml During Server Startup	6
Security Data: Backup	7
WebLogic LDAP Repository: Backup	7
Backing Up SerializedSystemIni.dat and Security Certificates	8
Restarting Failed Server Instances	9
Restarting an Administration Server on the Same Machine	10
Restarting an Administration Server on Another Machine	10-11
Restarting Managed Servers	12
Starting a Managed Server When the Administration Server is Accessible	12
Starting a Managed Server When the Administration Server is Not Accessible	12
